SUMMARY

Frontend Engineer with +4 years shipping production applications across fintech, crypto trading, and AI-powered collaborative tools. Specialized in React and Next.js, with deep experience in real-time multiplayer interfaces: live presence, collaborative editing, and client-state sync over event-driven backends (SpacetimeDB, Supabase Realtime). Led the frontend migration of a Miro-like diagramming canvas to a new realtime database, delivering full multiplayer without backend changes.

EXPERIENCE

Frontend Engineer

Nov 2025 - Present

Kolosal AI

- Migrated a real-time collaborative diagramming canvas from Supabase Realtime + REST to SpacetimeDB as the sole source of truth, rebuilding the editor greenfield (React Flow, Zustand/Immer) with full CRUD for nodes, edges, *swimlanes*, and sections over a single-op command protocol, verifying every server contract against the live module before implementing.
- Built multiplayer collaboration features on SpacetimeDB with no backend changes: 60fps live cursors, presence indicators, entity selection locking, real-time drag streaming, and per-keystroke collaborative editing with remote caret rendering, by designing client-side channels over the existing table schema.
- Designed and shipped a cross-feature reference sidebar with drag-and-drop node linking (@dnd-kit), project-wide realtime subscriptions, and persisted per-project UI state, enabling users to link and navigate nodes across feature canvases.
- Resolved synchronization race conditions affecting multiplayer collaboration, eliminating stale node positioning across clients and improving editing reliability.
- Improved perceived performance with optimistic UI patterns (instant feature creation with temp-id reconciliation, client-side pagination) and eliminated sync flicker by fixing data models rather than patching with *effects*

Frontend Engineer

Feb 2024 - Nov 2025

Bitwyre (PT Teknologi Terstruktur Berantai)

- Architected and built the frontend for a cryptocurrency exchange platform using Next.js and TypeScript, implementing realtime price feeds via WebSocket integration for multiple trading pairs.
- Developed an institutional OTC trading platform with secure transaction flows, role-based access controls, and compliance features for enterprise clients.
- Improved application performance through code splitting, lazy loading, and React Query optimization, significantly reducing bundle size and initial load times.
- Built cross-platform mobile features for Bitwyre's crypto card product using React Native, extending core functionality to iOS and Android platforms.
- Designed and implemented comprehensive error handling for WebSocket connections, ensuring reliable real-time data delivery even during network disruptions.
- Collaborated with backend engineers on API design, reducing unnecessary data transfers and improving overall platform responsiveness.
- Managed deployment pipeline using Docker and Jenkins, working with DevOps team to containerize applications and automate CI/CD workflows for staging and production environments.

Frontend Developer
Skyshi Digital Indonesia

Apr 2022 – Feb 2024

- Delivered client projects using Next.js and React, including e-commerce platforms, marketing sites, and corporate websites in a fast-paced agency environment.
- Built and maintained a scalable component library and design system used across multiple client projects, reducing development time and ensuring brand consistency.
- Optimized website performance across client sites by implementing code splitting, image optimization, and caching strategies, improving Core Web Vitals scores.
- Integrated analytics pipelines (Google Analytics, Mixpanel) and implemented A/B testing frameworks to enable data-driven design decisions for marketing campaigns
- Led mobile-first development approach for all projects, ensuring responsive experiences across devices and browsers with cross-browser compatibility testing.
- Collaborated with designers and backend teams to translate Figma designs into production-ready components, establishing clear handoff processes and documentation.
- Built an internal ticketing system using Angular, implementing features for issue tracking, assignment workflows, and status management.
- Developed a dynamic form builder with drag-and-drop functionality, supporting multiple field types, conditional logic, and real-time preview capabilities.

INTERNSHIP

Frontend Developer
Skyshi Digital Indonesia

Jan 2022 – Mar 2022

- Developed feature sets for internal web applications using React.js, Vue.js, and Chakra UI, collaborating within an existing codebase to ship production-ready UI.
- Delivered responsive, cross-browser-compatible interfaces by configuring PostCSS with Autoprefixer to ensure consistent rendering across browsers and screen sizes.

PROJECTS

Lanjut
Creator and Maintainer

Jul 2026 – Present

- Built Lanjut, a free, open-source ATS-friendly resume builder that runs 100% in the browser with no backend, keeping all user data private and local-first.
- Designed a versioned, read-time schema migration system backed by IndexedDB persistence and Zustand state, with bail-safe migrations that never corrupt or discard unparseable documents.
- Applied a functional programming style throughout the codebase using @mobily/ts-belt, favoring composable, pure utilities over ad-hoc imperative logic.
- Own the full repository lifecycle, commit conventions, pre-commit linting/formatting, and release/changelog management.

EDUCATION

Associate Degree
AMIK Serang

Dec 2021 – Dec 2024

- Led weekly weekend developer meetups focused on technical knowledge sharing.
- Facilitated peer learning sessions covering programming, web development, and user experience.

CERTIFICATES

Frontend Developer (React)
Hackerrank

C1 Advanced English Certificate
EF Set

SKILLS

Frontend: React, React Native, Next.js, Vue, Svelte, Svelte Kit, Astro
Specialties: Real-time collaboration, Frontend architecture, Performance optimization, Accessibility
State & Data: Zustand, Jotai, TanStack Query, GraphQL, REST, WebSocket
Testing: Jest, Vitest, Testing Library, Playwright
Backend: Node.js, Hono, PostgreSQL, SQLite, Drizzle
General Tooling: Git, Docker, Jenkins, Semantic Release, Cursor, Claude Code, Ollama

LANGUAGES

Indonesia	Native
English	Fluent
